**Investment Objective**

The RiverNorth Opportunistic Municipal Income Fund, Inc. seeks to provide current income exempt from regular U.S. federal income taxes¹ with a secondary objective of total return.

**Investment Strategy**

The Fund’s Managed Assets are allocated among two principal strategies: Tactical Municipal Closed-End Fund (CEF) Strategy (managed by RiverNorth) and Municipal Bond Income Strategy (managed by MacKay Shields LLC).

RiverNorth determines which portion of the Fund’s assets is allocated to each strategy and may, from time to time, adjust the allocations. The Fund may allocate between 25% to 50% of its Managed Assets to the Tactical Municipal CEF Strategy and 50% to 75% of its Managed Assets to the Municipal Bond Income Strategy.

The Tactical Municipal CEF Strategy typically invests in municipal CEFs and exchange-traded funds (ETFs) seeking to derive value from the discount and premium spreads associated with CEFs. The Municipal Bond Income Strategy primarily invests in municipal debt securities of any credit quality, including securities that are rated below investment grade².

^ Data as of 3.31.2019. Based on market value (including assets attributable to leverage). Subject to change. This should not be considered a recommendation to buy or sell any security.

The total annual expense ratio as a percentage of net assets attributable to common shares including acquired fund fees and expenses, as of October 25, 2018, is 2.16%. Performance data quoted represents past performance, which is not a guarantee of future results. Current performance may be lower or higher than the performance quoted. The principal value and investment return of an investment will fluctuate so that your shares may be worth more or less than their original cost. You can obtain performance data current to the most recent month end by calling 844.569.4750. Total return measures net investment income and capital gain or loss from portfolio investments. All performance shown assumes reinvestment of dividends and capital gains distributions. The Fund has implemented a level distribution policy resulting in monthly distributions of $0.0917 per share of common stock, representing an annualized distribution rate of 5.29% as of 3.31.19. Distributions may be paid from sources of income other than ordinary income, such as net realized short-term capital gains, net realized long-term capital gains and return of capital. The Fund estimates that 65.20% of the distribution is attributable to current year net investment income and 34.71% is attributable to return of capital. The actual amounts and sources of the amounts for tax reporting purposes will depend upon the Fund’s investment experience during the remainder of its fiscal year and may be subject to changes based on tax regulations. If a distribution includes anything other than net investment income, the Fund provides a Section 19(a) notice of the best estimate of its distribution sources at that time. These estimates may not match the final tax characterization (for the full year’s distributions) contained in shareholders’ 1099-DIV forms after the end of the year.

**Leverage** is based on the use of proceeds received from tender option bonds transactions (TOBs), issuing Preferred Shares, or funds borrowed from banks or other institutions, expressed as a percentage of Managed Assets.*

*Managed Assets are the Fund’s total assets (including any assets attributable to leverage), minus the sum of its accrued liabilities (other than Fund liabilities incurred for the purpose of creating effective leverage (i.e. TOBs) or Fund liabilities related to liquidation preference of any preferred shares issued).

Start date with Fund for all Portfolio Managers: Since Inception

Disclosures & Definitions

Although the income from the Fund's municipal bond investments is generally exempt from federal income tax, you may owe taxes on any capital gains realized through the Fund's trading or through your own redemption of shares. For some investors, a portion of the Fund's income may be subject to state and local taxes, as well as to the federal alternative minimum tax.

Risk is inherent in all investing. Investing in any investment company security involves risk, including the risk that you may receive little or no return on your investment or even that you may lose part or all of your investment. Therefore, before investing in the Common Shares, you should consider the risks as well as the other information in the prospectus.

More detailed information regarding these risks can be found in the Fund’s prospectus.

Past performance is no guarantee of future results. Diversification does not ensure a profit or guarantee against loss.

An investment in the Fund is not appropriate for all investors and is not intended to be a complete investment program. The Fund is designed as a long-term investment and not as a trading vehicle.

The Fund is a closed-end fund and closed-end funds do not continuously issue shares for sale as open-end mutual funds do. Since the initial public offering, the Fund now trades in the secondary market. Investors wishing to buy or sell shares need to place orders through an intermediary or broker. The share price of a closed-end fund is based on the market’s value.

Investments may include securities that have a rating that is below investment grade, including “high yield” securities, which are bonds that have adequate capacity to meet financial commitments, but are more subject to adverse economic conditions or changing circumstances, as defined by Nationally Recognized Statistical Rating Organizations (“NRSRO”), such as Fitch.

Estimated Duration: Duration is a measure of the sensitivity of the price of a fixed income investment to a change in interest rates. Duration is expressed as a number of years. Duration is estimated by the adviser based on certain assumptions from third-party data and is subject to change. The difference between Unhedged and Hedged duration is that hedged duration includes the effect of a short US Treasury Futures position used to manage interest rate risk.

The price at which a closed-end fund trades often varies from its NAV. Some funds have market prices below their net asset values - referred to as a discount. Conversely, some funds have market prices above their net asset values - referred to as a premium.

6 The Bloomberg Barclays Municipal Index is an unmanaged index made up of a representative list of general obligation, revenue, insured and pre-refunded bonds. The index is frequently used as a general measure of tax-exempt bond market performance. The index cannot be invested in directly and does not reflect fees and expenses.
